

ASSURED DELIVERY™

Secure Identity Solutions, Inc. (SIS) is a security consultancy with extensive expertise in architecting and integrating Identity & Access Management (IAM) solutions for corporate enterprises. The successful deployment of these types of solutions demands vision, experience, perspective, and knowledge that extends to how organizations operate; we possess industry recognized expertise, unparalleled knowledge, and enterprise experience which is used to advise our customers on the identity management strategy that best fits their dynamic business needs. SIS helps organizations dissect their enterprise and clearly articulate their business requirements, enabling them to secure executive support and budgets for their enterprise identity management strategy.

Assured Delivery™ is a proprietary solution delivery system that allows SIS to deliver a security framework to meet the customer's business needs. The "Assured Delivery" system utilizes SIS' proprietary systems engineering processes to give customers a solution that allows them to address specific business or functional needs. Assured Delivery™ provides the customer with an integrated solution for a fixed price¹. *"Stop buying time, buy a solution!" -- SIS Assured Delivery™ Solutions.*

IDENTITY FEDERATION SERVICES

Rapid Federation Deployment

This offering is designed for customers who have an established SiteMinder 6.0 SP5 CR1 or higher infrastructure already deployed in a production environment. SIS will develop a federation architecture based on the business, functional, and operational requirements, as well as deploy and integrate the required components to meet the requirements.

Duration: 3 Weeks

Enterprise Federation Deployment

This offering is also designed for customers who have an established SiteMinder 6.0 SP5 CR1 or higher infrastructure already deployed in a production environment. In addition to the services associated with the Rapid Federation Deployment, SIS will also deploy a Federation Endpoint at the partner site. This offering includes all configuration and support services needed to successfully federate between the IDP and SP.

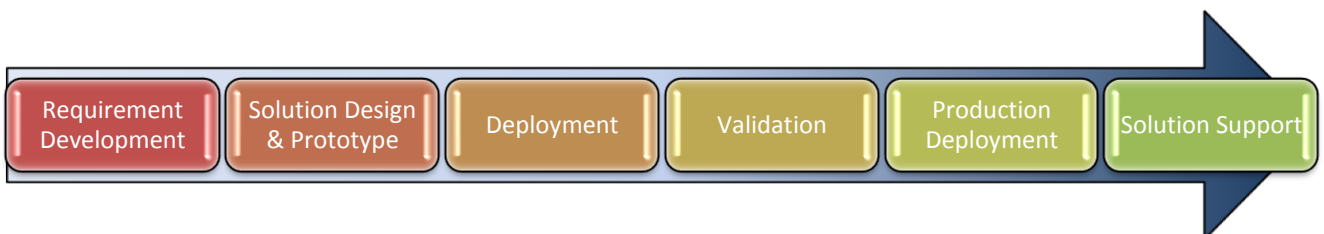

Duration: 5 Weeks

Rapid Federation \ Web Access Management Deployment

This offering is designed for customers that do not currently have a SiteMinder Web Access Management infrastructure to build upon. SIS will not only design and deploy Federation Services, but they will also design and deploy a SiteMinder Web Access Management system and integrate one (1) web based application. Additionally, a complete SiteMinder Web Access Management application with Federation Services will be developed as the primary requirement. The solution architecture will not only be based on the business, functional, and operational requirements gathered by SIS, but will also comply with any documented requirements presented by the customer.

Duration: 8 Weeks

PROJECT PROGRESSION

Requirements & Analysis

During this stage, the business, functional, and system requirements will be collected. The business objectives and critical path items will also be documented at this time. As a final step to this phase, SIS will further refine the requirements to ensure that the project goals are aligned.

- Capacity Planning
- Partner On-Boarding

Deliverable: Requirements Traceability Matrix (RTM)

Design & Rapid Prototype

The business and functional requirements will be used to develop and document the desired solution. The resulting design will be used as the basis for the rapid prototype integration with SIS' SP / IDP.

- Solution Architecture
- Federation Partner Hosting
- Federation Roadmap
- Use Case Development

Deliverables:

- Systems Design Specification (SDS)
- Successful Federation with SIS's SP/IDP
- Updated RTM
- SP Metadata Export

Deployment

SIS will deploy the proven design in the pre-production environment and conduct functional and system testing of the solution. During this phase, partner integration testing will occur to validate end-to-end functionality.

If applicable to the SOW, SIS will provide configuration services for the remote federation partner. Additionally, onsite configuration services will be provided to coincide with configuration efforts at the Identity Provider. If partner configuration support was not contracted for the effort, SIS will provide the partner with the SP Metadata export file to ease the SP configuration.

Deliverable:

- Partner Deployment Guide

Validate

SIS will use the RTM to verify that the collected requirements have been achieved.

Deliverables:

- RTM Report
- Test Results

Production Deployment

SIS will move the solution from the pre-production environment to the production environment and conduct system testing between the IDP and SP. If applicable to the SOW, SIS will also migrate the remote partner solution to a production environment at the same time so real-time testing and troubleshooting can occur.

Deliverables

- Solution As-Built Documentation

Support

SIS will provide knowledge transfer and remote support services to system administrators. Additionally, SIS will provide on call support for fourteen (14) calendar days after the solution has been deployed to the production environment.

PRICING

Rapid Federation Deployment

Two (2) Partners	\$65,000.00
Five (5) Partners	\$75,000.00

Enterprise Federation Deployment

Two (2) Partners	\$85,000.00
Five (5) Partners	\$105,000.00

Rapid Federation \ Web Access Management Deployment

Two (2) Partners	\$105,000.00
Five (5) Partners	\$125,000.00

Annual Support Contract: \$20,000.00

ⁱ Travel expenses are billed as incurred and are not included in the pricing.
